Tobacco Briefing Room

The next release is Sept. 25, 2003

Approved by the World Agricultural Outlook Board.

On March 1, 2003, tobacco growers indicated intentions to harvest 417,510 acres, nearly 13,000 acres below last year's actual acreage. Lower flue-cured and burley quotas are behind most of the decline. Last season, March 1 intentions were 429,410 acres and 430,280 acres were actually harvested.

U.S. leaf production in 2002-03 is estimated at 889.6 million pounds, about 102 million pounds below 2001. Production was the lowest since 1908. Yields in 2002 were 2,068 pounds per acre, down due to drought and extreme heat. Yields reached 2,293 pounds per acre in 2001.

Burley sales ended March 13^{th.} Gross marketings reached 303.7 million pounds. Gross auction sales combined with contract sales averaged \$197.5 per hundredweight (cwt), the highest on record. Producer sales (net auction, contract, and "farmgate" sales) were 299.8 million pounds, compared with 343.7 million pounds last season.

Contract centers began receiving burley tobacco on November 18, 2002, and were open 51 days before closing on February 21, 2003. Seventy-four percent of producer sales were sold using contracts. Contract sales totaled 219.5 million pounds valued at \$435.7 million. The season-average price was \$198.5 per cwt compared with \$199.0 last season. Last season, contract volume accounted for 224.5 million pounds and in 2000, contract sales were 87.5 million pounds.

Burley auction markets opened November 18, 2002, and closed March 13, 2003, after 44 days of sales. Gross volume of 82.8 million pounds was the smallest on record. Sales totaled \$161.4 million. The average price was the highest on record at \$197.5 cents per pound. The Burley Cooperatives took 31.9 percent, or 24.3 million pounds, of net auction sales under loan, compared with 12.4 million pounds in 2001. Net (producer) sales at auction were 78.3 million pounds, compared with 113.4 million pounds last season.

On February 1, the United States Department of Agriculture announced 2003 quotas, no-net-cost assessments, and price support for burley tobacco. The national marketing quota for the 2003 crop is 287.8 million and is based on the following: (1) cigarette manufacturers' purchase intentions of 184.9 million pounds, unmanufactured exports (3-yr. average) of 137.9 million pounds, and a reserve stock adjustment of -35 million pounds. The Secretary of Agriculture made no discretionary adjustment this year. For each farm, the 2003 basic quota will decline approximately 11.1 percent from 2002. The effective quota is expected to be about 320.2 million pounds, 19 million pounds less than 2002.

The tobacco balance of trade--the value of manufactured and unmanufactured exports less imports (arrivals)--continued its sharp decline. The 2002 balance of trade fell to \$1.7 billion, the lowest level since 1977, and \$4.2 billion below the peak in 1995 of \$5.9 billion. High-valued cigarette exports boosted the balance of trade during the mid-1990s. Cigarette exports have since declined, and the trade balance has been further exacerbated by the decline in leaf exports and the surge in leaf imports that have occurred in the late 1990s.

After a slight upward bump in calendar 2001, unmanufactured tobacco exports fell 18 percent in 2002. At 338.0 million pounds (153,314 metric tons), exports were the lowest since the mid-1970s. U.S. shipments accounted for about 8 percent of total world exports. The United States was the second largest exporter, following Brazil, which accounted for 21 percent of world exports and shipped 987.0 million pounds. Ranked by volume, Zimbabwe, China, India, and Malawi were major exporters in 2002.

On a farm-sales-weight basis, total calendar 2002 exports were 476.9 million pounds compared with 578.7 million pounds a year earlier.

Imports (consumption, duty paid) continued to advance in 2002, gaining 12 percent to reach 578.1 million pounds. This is the highest level since 1997's 676.5 million pounds. Oriental leaf slipped 10 percent to reach 125.4 million pounds. Shipments from Turkey declined due to a poor crop there. Stemmed flue-cured leaf imports advanced 17 percent to reach 120.5 million pounds. Burley import volume rose slightly. Cigar leaf imports slipped 3 million pounds to 85.0 million pounds. Imports of stems rebounded after a slight decline last year, ending at 121.6 million pounds, just over 50 percent compared with 2001.

Consumers in the United States smoked an estimated 420 billion cigarettes in 2002, about 1.2 percent less than the previous year. Year-end taxable removals are estimated at 400 billion pieces. Continued increases in taxes and restrictions on where people can smoke were the main factors behind the decline.

Cigarette exports in 2002 slipped slightly to 127 billion cigarettes from 134 billion cigarettes the previous year. Japan, at 78 billion cigarettes, was overwhelmingly the largest destination for U.S. cigarettes. Saudi Arabia received 12 billion cigarettes followed by Israel with 5 billion. The European Union (EU), at 4 billion pieces is no longer a major importer of U.S. cigarettes. The total value of cigarettes shipped was \$1.5 billion. Unit value was \$11 per 1,000 cigarettes, compared with \$16 the previous year.

Tobacco Products

Cigarette Consumption Continues Slide in 2002

Consumers in the United States smoked an estimated 420 billion cigarettes in 2002, about 1.2 percent less than the previous year. Year-end taxable removals are estimated at 400 billion pieces. Continued increases in taxes and restrictions on where people can smoke were the main factors behind the decline.

Per capita consumption in 2002 was 1,979 pieces, 2.3 percent below 2001 (based on the entire over-18 population category) compared with 2,026 pieces per person the previous year. Per capita consumption has been slipping for over two decades. For the over 16-years-and-older population, per capita consumption in 2001 fell to 1,906 pieces per person from 1,951 pieces in 2000. These estimates are based on revised population statistics from the Bureau of the Census.

Cigarette exports in 2002 slipped slightly to 127 billion cigarettes from 134 billion cigarettes the previous year. Japan, at 78 billion cigarettes, was overwhelmingly the largest destination for U.S. cigarettes. Saudi Arabia received 12 billion cigarettes followed by Israel with 5 billion. The EU, at 4 billion pieces, is no longer a major importer of U.S. cigarettes. The total value of cigarettes shipped was \$1.5 billion. Unit value was \$11 per 1,000 cigarettes, compared with \$16 the previous year.

Generic (discount) cigarettes' share of sales slipped to 25.3 percent in 2002, compared with 26.5 percent of total U.S. sales during calendar 2001. Promotions and rebates for premium cigarettes have continued to take market share from generic cigarettes.

Small manufacturers continue to make inroads in cigarette sales, reaching between 5 to 10 percent of total sales. Combined with imports, they have garnered an unprecedented slice of the market from the big five manufacturers. Small manufacturers have taken advantage of the post-Master Settlement Agreement market to expand rapidly with low-priced brands.

The Federal excise tax for cigarettes increased 5 cents per pack to 39 cents per pack on January 1, 2002.

Fiscal year 2001 (October 2000-September 2001) Federal cigarette excise tax collections are estimated at \$7.4 billion compared with \$7.2 billion the previous year. Collections are likely to increase further in fiscal 2002 because of the higher Federal excise tax. Federal cigarette excise tax collections during calendar 2000 were \$7.3 billion.

State tax collections in 2001 increased by \$97 million to \$8.4 billion. Higher taxes offset lower consumption. State excise taxes were collected on 411.7 billion cigarettes. State sales tax collections reached \$2.9 billion. Nineteen States have cigarette excise taxes of 50 cents or greater and five have taxes of \$1.00 per pack or greater. On April 3, 2002, the New York State cigarette tax increased by 39 cents per pack, bringing the total New York State excise tax to \$1.50 per pack, the highest in the Nation. New York City smokers pay an additional \$1.50 per pack city excise tax. Connecticut also increased its tax on April 3rd, by 39 cents, making its total tax 89 cents per pack. The average State cigarette excise tax in 2001, weighted by consumption, is 41.4 cents per pack. Vermont, Kansas, and Hawaii are set to increase cigarette excise taxes on July 1, 2003.

Manufacturers Increase Wholesale Cigarette Prices

The last wholesale premium cigarette price increase was 12 cents per pack on April 1, 2002. The wholesale price of premium cigarettes is now \$118.7 per 1,000, excluding tax. The Federal tax is \$19.50 per 1,000 cigarettes. Some changes in promotions and rebates have occurred during 2002 and early 2003.

Cigarette Type Survey Results

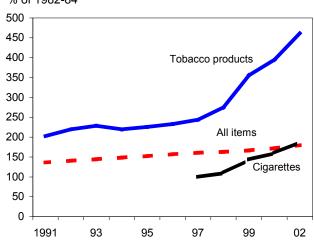

Filter-tipped cigarettes became popular in the 1950s and in 1960 first outweighed non-filter cigarettes in popularity. Since the mid 1980s, non-filter tips have accounted for less than 5 percent of U.S. production. The annual Economic Research Service (ERS) survey of manufacturers indicated that filter-tip production comprised 99 percent of total output in 2002. In 2001, filter-tips made up 98.9 percent of total production. The proportion of 80-85 mm cigarettes increased from 61.4 percent last year to 62.0 percent. The 100 millimeter filter-tip category made up about 35.9 percent of 2002 output, compared with 36.0 percent last year.

Cigar Output Surges

According to data just released by the Department of Treasury's Alcohol and Tobacco Tax and Trade Bureau (formerly Bureau of Alcohol, Tobacco, and Firearms), U.S. cigar production in 2001 reached 3,743 million cigars, compared with 2,825 million in 2000. Higher cigar exports accounted for some of the gain. Production in 2002 is expected to decline slightly. Taxable removals in 2001 were 3,564 million cigars, 24 percent above 2000. Cigar consumption in 2001 was 4.1 billion cigars, 6 percent above 2000's 3,850 million cigars. Calendar year 2001 exports of cigars advanced slightly to 124 million cigars. Exports during 2002 nearly doubled to 236 million cigars. Lebanon imported 127 million cigars, accounting for nearly all the gain. Other major destinations in 2002 were Canada with 31 million pieces, Turkey with 10 million, and the Netherlands with 7 million. During 2002, cigar imports (consumption) reached 413 million compared with 544 million in 2001. The Dominican Republic accounted for two-thirds of 2002 import volume. Honduras was the next major source of cigars. Small cigar output in 2001 was 2,739 million cigars, compared with 2,469 million in 2000. Although data are not available for 2002, small cigar output is expected to continue rising. For 2001, taxable removals of small cigars was 2,516 million cigars. 300 million above 2000's 2,469 million pieces. For 2002, a similar increase is expected.

Figure 1

Consumer Price Index and tobacco products
% of 1982-84

Smoking Tobacco

Smoking tobacco output increased 21 percent in 2002, reaching 15.5 million pounds. Smoking tobacco consists of pipe tobacco, used in pipes, and cut smoking tobacco, used in roll-your-own cigarettes. Pipe tobacco declined lightly in 2002 but was offset by cut smoking tobacco's 36 percent gain. Taxable removals for pipe tobacco fell 2 percent in 2002, but cut smoking tobacco increased 12 percent for an overall gain of 7 percent for total smoking tobacco in 2002.

Chewing Tobacco

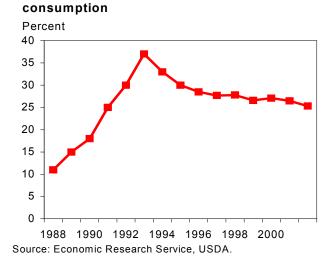

Chewing tobacco continued its descent as output fell 5 percent in 2002, reaching 44.5 million pounds. Taxable removals declined 8 percent ending at 49.7 million pounds. All categories declined. Recent tax increases have made chewing tobacco a less attractive alternative to cigarettes.

Snuff

Once again snuff output gained, making it one of the few upward trends in the industry. Output gained 3 percent due to higher moist snuff production. Dry snuff continued to decline. Snuff output reached 72.7 million pounds compared with 70.9 million in 2001. Taxable removals of snuff in 2001 reached 71.7 million pounds, 2 million pounds higher than the previous year. Snuff continues to provide a substitute tobacco product in areas with restricted smoking.

U.S. Imports and Exports

U.S. Balance of Trade Continues Slide To Below \$2 Billion

The tobacco balance of trade--the value of manufactured and unmanufactured exports less imports (arrivals)--continued its sharp decline. The 2002 balance of trade fell to \$1.7 billion, the lowest level since 1977, and \$4.2 billion below the peak in 1995 of \$5.9 billion. High-valued cigarette exports boosted the balance of trade during the mid-1990s. Cigarette exports have since declined, and the trade balance has been further exacerbated by the decline in leaf exports and the surge in leaf imports that have occurred in the late 1990s.

Tobacco product export value (mostly cigarettes and smoking tobacco in bulk) peaked in 1996 and has been declining every year but one since. Leaf imports nearly doubled in 1996 and increased further in 1997, before dropping to the 700-800 million pound range where they remain. U.S. leaf exports have fallen because foreign producers have become more competitive. U.S. leaf is facing narrowing quality margins and increasing price margins. The U.S. tobacco program limits the flexibility of exporters to take advantage of short-term opportunities such as existed when Zimbabwean production slipped due to political unrest. On the other hand, Brazil rapidly boosted production and seized the vacuum left by Zimbabwean shortages. In 2002, cigarette exports fell 5 percent while value fell 31 percent, compared with 2001. Cigarette exports make up 75 percent of product export value. During 2002, the value of leaf exports slipped by 17 percent (nearly \$50 million) after gaining almost 4 percent in 2001. On the import side, tobacco product imports (arrivals) advanced 15 percent or nearly \$50 million as the value of cigarette and cigar (large and small) imports increased. Leaf import value slipped slightly, falling by \$9 million.

Leaf Tobacco Export Volume Slips

After a slight upward bump in 2001, calendar-year unmanufactured tobacco exports fell 18 percent in 2002. At 338.0 million pounds (153,314 metric tons), exports were the lowest since the mid-1970s. U.S. shipments accounted for about 8 percent of total world exports. The United States was the second largest exporter, following Brazil, which accounted for 21 percent of world exports and shipped 987.0

million pounds. Ranked by volume, Zimbabwe, China, India, and Malawi were also major exporters in 2002.

On a farm-sales-weight basis, total calendar 2002 exports were 476.9 million pounds compared with 578.7 million pounds a year earlier. All categories of shipments declined. Stems and "other leaf" fell by 24 percent and flue-cured slipped by 19 percent. Burley was relatively unscathed with a 5-percent drop. High prices for U.S. leaf continued to hamper export prospects. Brazil was able to move quickly to accommodate short supplies in 2001 and 2002.

Shipments to Japan were down slightly, by 4 percent in 2002. But shipments to the EU declined nearly 30 percent. Major European buyers, except Denmark, reduced takings. Japan accounted for 15 percent of U.S. leaf shipped overseas and the EU purchased 46 percent. Switzerland, Malaysia, Thailand, and Korea all purchased more than 10 million pounds of leaf. Eighty-three countries purchased leaf from the United States in 2002.

Imports for Consumption Up

Imports (consumption, duty paid) continued to advance in 2002, gaining 12 percent to reach 578.1 million pounds. This is the highest level since 1997's 676.5 million pounds. Oriental leaf slipped 10 percent to reach 125.4 million pounds. Shipments from Turkey declined due to a poor crop there. Stemmed flue-cured leaf imports advanced 17 percent to reach 120.5 million pounds. Burley import volume, as indicated by the general "Not Specifically Provided For" (NSPF) category which contains mostly burley leaf, rose slightly. Cigar leaf imports slipped 3 million pounds to 85.0 million pounds. Imports of stems rebounded after a slight decline last year, ending at 121.6 million pounds, just over 50 percent compared with 2001.

General Imports Advance 4 Percent to 585 Million Pounds

General imports (arrivals) advanced 4.0 percent during 2002, reaching 585.4 million pounds. compared with 561.7 million pounds in 2001. The 22-million-pound gain was much smaller than the 121-million-pound gain the previous year. Except for

Figure 3 Export markets for U.S. tobacco

Million pounds 700 Total 600 500 Other countries 400 300 Asia 200 100 EU-15 0 1990 1992 1994 1996 1998 2000 2002

unstemmed leaf (including Oriental), and cigar leaf, all categories of imports advanced. Oriental leaf slipped 21 percent to 110.8 million pounds. Stemmed flue-cured imports reached 133.1 million pounds, a 17-percent gain and burley (NSPF), gained 17 percent about the same gain as last year.

Stem imports advanced 17 percent after surging 52 percent in 2001.

Foreign Leaf Stocks

U.S. stocks of imported cigarette leaf are at the second lowest level in a decade. January 1, 2003 imported cigarette leaf stocks are 745 million pounds, 56 million pounds below January 1, 2002. Oriental stocks are just over 200 million pounds, at historically low levels. Imported flue-cured stocks are about 267 million pounds, 5 percent below the beginning of 2002. Stocks of burley slipped 13 percent.

Tariff-Rate Quota Update

The tariff-rate quota (TRQ) for 2002-03 on cigarette tobacco leaf imports (excluding Oriental) was 32 percent filled as of April 1, 2003, at 48.6 million pounds. The tobacco TRQ year begins on September 13 and runs through September 12 the following year. The total quantity allowed under the TRO is 332.2 million pounds. During the 2001-02 TRQ year, 73.6 percent of the quota, or 244.4 million pounds were imported under the quota.

U.S. Tobacco Leaf

Domestic Supplies Slip for 2002-03

Tobacco leaf production in 2002 is estimated at 889.6 million pounds. Marketings of flue-cured totaled 564.8 million pounds and burley reached 299.8 million pounds. Marketings of other types are estimated at about 70 million pounds. Adding beginning stocks of 1.7 billion pounds, results in total estimated supply of 2.6 billion pounds. Supply in 2002 is 2.7 billion pounds, or 7 percent more than the previous season.

Domestic leaf stocks at the beginning of the 2002 marketing year (July 1 for flue-cured and cigar wrapper, October 1 for all other types) were 8 percent lower than at the beginning of 2001. With grower intentions of 417,510 acres, a crop of about 889 million pounds is likely, given average weather conditions. At this level, leaf supplies in 2003 should be close to 2.5 million pounds.

All tobacco types except Maryland, Pennsylvania cigar filler, Connecticut cigar binder, shade grown cigar wrapper, and Perique are grown under quotas administered by the USDA.

U.S. Tobacco Industry To Buy 184.9 Million Pounds of Burley Tobacco in 2003

U.S. cigarette manufacturers plan to purchase 184.9 million pounds (farm-sales weight) of 2002-crop burley tobacco. The manufacturer's purchase intentions are used to calculate the quota for the 2003-04 burley tobacco crop. Last season, purchase intentions were 227.4 million pounds. The

Agricultural Adjustment Act of 1938 requires each major domestic cigarette manufacturer to purchase an amount equal to at least 90 percent of its stated purchase intentions to avoid the assessment of a penalty. This assessment is adjusted if marketings fall short of the effective quota.

Efforts To Eliminate Unauthorized Pesticides Continue

Pesticide use on U.S. tobacco has been restricted for many years. Furthermore, the Food Security Act of 1985 extended adherence standards. The act requires the USDA to inspect domestic and imported fluecured and burley tobacco to determine if pesticide residues exceed established limits.

Before selling their tobacco, growers must certify to the Farm Service Agency (FSA) that any pesticides used in production have been approved by the Environmental Protection Agency for use on tobacco and were applied in accordance with labeled directions. Growers lose price support if they falsify the certification, fail to certify, or refuse to provide samples for testing. Growers who are found filing a false report will be required to refund any price support advances received on the current crop. In addition, violators are subject to a \$10,000 fine, 5 years imprisonment, or both.

To ensure the integrity of U.S.-grown tobacco, efforts to eliminate unauthorized pesticides include: 1) tests of samples taken from auction warehouse floors, 2) efforts to educate growers about unapproved pesticides, and 3) intensified monitoring of pesticide use and penalties for misuse.

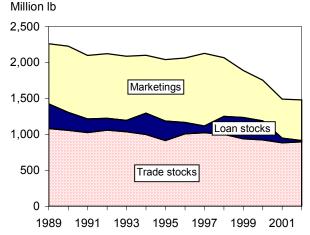

Flue-Cured Tobacco

July-January disappearance of flue-cured tobacco declined 7 percent compared with the same period during the 2001 season. Disappearance for the first half of the 2002 marketing year is 371.1 million pounds, compared with 2001's 398.4 million pounds. Year-end disappearance is likely to be slightly more than 600 million pounds. Declining cigarette production and diminished exports have contributed to lower disappearance. Domestic disappearance slipped 8 percent and exports declined 28 percent.

During the first 7 months of the marketing season, (July 2002-January 2003) flue-cured exports slipped 25 percent compared with the same period last season. Drought reduced the availability and quality of leaf. Germany and Japan, the top buyers, both reduced purchases substantially, but Switzerland increased its imports. Germany made its first substantial purchases from Brazil. Many countries that purchase smaller quantities reduced imports. During the 7-month period, flue-cured exports totaled 107.5 million pounds compared with 143.5 million pounds the same time last season. Total flue-cured exports for the previous season (July 2001--June 2002) were 190.2 million pounds.

March 1st harvest intentions for flue-cured tobacco are 2 percent below last year's actual acreage. Given typical weather conditions, the 241,000 acres to be harvested should result in a crop of about 546 million pounds, 20 million pounds above last season.

Figure 4 Flue-cured tobacco: Supply, price, and use

Trade stocks include those of manufactures and dealers. Crop year beginning July 1, 2001 and 2002 are preliminary Source: Agricultural Marketing Service, USDA.

^{1/} Sum of manufacturers purchase intentions, exports (3-year average), and the reserve stock adjustment. 2/ Sum of manufacturers purchase intentions, exports (3-year average), and the reserve stock adjustment by the Secretary not to exceed 3 percent upward or downward. The basic quota was limited to maximum declines of 6 percent a year during 1986-89 and 10 percent a year during 1990-96. 3/ Adjustment for over- and undermarketings, latest year estimated. 4/ Downward adjustment limited to one-half of excess.

^{1/1986} support level set by P.L. 99-272, April 7, 1986. 2/ Omits high and low years. 3/ The support rate is 1) the moving 5-year average of auction prices omitting high and low years (66.7 percent weight) and 2) the change in cents per pound of annual index of tobacco producers cost of production (33.3 percent weight). The law provides the Secretary of Agriculture discretionary authority to change the price support from 65 to 100 percent of the calculated change dictated by the two-part formula. 4/ Revised to reflect data for entire year.

Sources: Notices of Determination and Final Rules, Price Support Level, Flue-cured and Burley Tobacco, Federal Register, various issues, and unpublished reports, U.S. Department of Agriculture, Farm Service Agency, Tobacco and Peanuts Division.

Burley Tobacco

At the end of burley sales on March 13th, gross marketings reached 303.7 million pounds (gross auction sales combined with contract sales) and averaged \$197.5 per hundredweight, the highest on record. Producer sales (net auction, contract, and "farmgate" sales) were 299.8 million pounds, compared with 343.7 million pounds last season.

Auction markets opened November 18, 2002, and closed February 21, 2003, after 44 days of sales. Gross volume of 82.8 million pounds was the smallest sale on record. Value was \$161.4 million. Average price was the highest on record at \$197.5 cents per pound. The Burley Cooperatives took 31.9 percent, or 24.3 million pounds, of net auction sales under loan, compared with 12.4 million pounds in 2001. Net (producer) sales at auction were 78.3 million pounds, compared with 113.4 million pounds last season. At auction, quality of offerings was not as good this season, with fair leaf making up 67 percent of sales. The percentage of good and fine quality tobacco decreased, while fair and low tobacco increased.

This season, 73 percent of the leaf marketed was sold prior to the holiday break. During the 2001 season, 82 percent was marketed prior to the holidays.

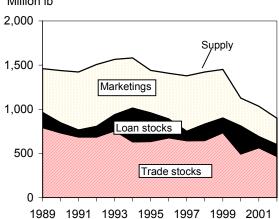

Contract centers began receiving tobacco on November 18, 2002, and were open 51 days before closing on February 21, 2003. Last season contract centers were open 70 days. As in the 2001 season, 32 contract centers operated in 22 markets. Seventy-four percent of producer sales were sold directly using contracts. Contract sales totaled 219.5 million pounds valued at \$435.7 million. The season average was \$198.5 per hundred pounds compared with \$199.0 last season. Last season, contract volume reached 224.5 million pounds and in 2000, contract sales were 87.5 million pounds.

Farmers indicated on March 1 their intention to harvest 151.100 acres of burley tobacco during the 2003 season. With normal yields, this would result in a crop of 290 million pounds, well below the effective quota of 320.2 million pounds for the 2003-04 crop year. For the 2002 season, intentions were 159,600 and actual harvested acres were 162,600 acres.

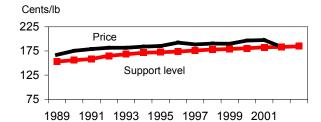

Disappearance in 2002 is expected to change little from the 2001 season. October-December 2002 use was 213 million pounds. However, use is expected to catch up in the final three quarters. Burley exports slipped 5 percent during calendar 2002, ending at 86.2 million pounds. Shipments during October 2002-January 2003 (the first 4 months of the 2002 marketing year) rose about 20 percent--13.5 million pounds compared with 11.3 million pounds last season. However, higher exports were offset by lower domestic use during the 3-month period. Reduced cigarette production, and increased use of foreign burley by cigarette manufacturers contributed to the lower figure.

On February 1, USDA announced 2003 quotas, nonet-cost assessments, and price support for burley tobacco. The national marketing quota for the 2003 crop is 287.8 million pounds. The 2003 quota is based on the following: (1) cigarette manufacturers purchase intentions of 184.9 million pounds, unmanufactured exports (3-yr. average) of 137.9 million pounds, and a reserve stock adjustment of -35 million pounds. The Secretary of Agriculture made no discretionary adjustment this year. For each farm, the 2003 basic quota will decline approximately 11.1 percent from 2002. The effective quota is expected to be about 320.2 million pounds, 19 million pounds less than 2002.

Southern Maryland Tobacco

Maryland tobacco (type 32) is grown in southern Maryland and Pennsylvania. Auction markets are held in southern Maryland, with one market holding sales in Lancaster County, Pennsylvania. Sales for 2003 opened on March 25 and lasted for 2 weeks. At auction, 3.5 million pounds were sold at auction averaging \$148.02 per hundredweight. Last season, 1.9 million pounds crossed the auction floor and sold for \$175.6 per hundredweight. Production of type 32 in Maryland for 2002 is projected at 2.4 million pounds. Total 2002 Maryland production (both Pennsylvania and Maryland) is estimated at 4.8 million pounds.

On March 1st, growers indicated they intend to harvest 2,800 acres of Maryland tobacco during the 2003-04 crop year. Maryland accounted for 1,500 acres and Pennsylvania 1,300. With normal yields, a crop of 4.4 million pounds is expected.

Disappearance of Maryland type leaf during the first quarter of 2002 was about one-third that of the same period a year earlier, the same decline as last season. Disappearance for the entire marketing year is expected to be about 5.5 million pounds.

Fire-Cured Tobacco

Virginia dark fire-cured (type 21) sales opened on December 4, 2002, and ended on January 7, 2003, after seven sales days. Markets were held in Blackstone and Farmville. The 2002 Virginia firecured crop was the smallest since 1908. Drought and hot weather combined to diminish quality throughout the growing area. Demand was strong for the small crop, increasing grade bid averages. However, both volume and value were lower. Marketings reached 1.4 million pounds, averaging \$188.4 per hundredweight. In 2001, 2.1 million pounds sold for \$175.1 per hundredweight.

For 2003, grower harvest intentions indicate steady acreage at 800 acres. Last season, intentions were 700 acres, 100 acres less than the final estimated acreage of 800 acres. With normal yields, production in 2003 should be about 1.4 million pounds.

On February 28th, USDA announced grower allotments and no-net-cost assessments for Virginia fire-cured tobacco. After falling 42 percent to 780 acres in 2002, allotments were stable, up one acre to 781 acres. The price support level advanced 3.3 cents per pound to \$1.636 per pound. No-net-cost assessments for Virginia fire-cured are 2 cents per pound. The Dark Tobacco Sales Cooperative administers the price support program.

Based on ending first-quarter stocks, disappearance of Virginia fire-cured tobacco is estimated at 1.7 million pounds for 2002, compared with 1.6 million pounds the previous season. Year-to-date disappearance through the end of December is 1.5 million pounds, compared with 1.4 million pounds the previous season.

Kentucky-Tennessee Fire-Cured (types 22-23)

Kentucky-Tennessee fire-cured markets opened on January 13, 2003, and ended on March 19, 2003, after 24 sales days. Demand was strong but volume of leaf sold at auction was the lowest since 1988. Prices were lower at \$166.3 per hundredweight compared with \$176.9 last season. Gross sales were 4.5 million pounds, following 18.8 million pounds last season. Of the 30-million-pound crop, only 14 percent has been sold at auction. Quality at auction slipped from last year with good and better grades falling 16 percent.

Grower harvest intentions as of March 1 indicate Kentucky-Tennessee fire-cured acreage will increase by 2 percent compared with 2002 to 10.510 acres. Last year, harvest intentions were 10.300 acres and final estimated acreage was 10,300 acres. With normal yields, production in 2003 should be about 29.6 million pounds, the same as the 2002 season.

Allotments were announced for Kentucky-Tennessee fire-cured (types 22-23) on February 28th. For 2003, allotments are set at 10,949 acres, compared with 10,706 last season. Price supports are \$1.817 per pound, an increase of 5 cents per pound.

Disappearance of Kentucky-Tennessee fire-cured through December 2002 reached 31.8 million pounds. Estimated disappearance for the 2002 season is expected to be about 35 million pounds, compared with 43.1 the previous season. Production in 2002 was 31.2 million pounds.

Dark Air-Cured

Opening sales of One Sucker (type 35) tobacco began on December 2, 2002, and final sales took place on February 7, 2003, after 16 auction days. At 1.4 million pounds, volume was the lowest on record. Producer sales at auction totaled 3.3 million pounds out of production of 9.5 million pounds. Quality and grade averages were down this season. Good and better quality leaf were down 7 percent and fair quality rose slightly. Low quality was unchanged. Average price was \$143.4 per hundredweight. Last season, auction sales reached 5.2 million pounds averaging \$149.4 per hundredweight. Producer sales were 1.4 million pounds. Last season, combined auction and country sales averaged \$183.1 per hundredweight. During the current season, cooperatives took 102,073 pounds of One Sucker leaf, 7.8 percent of producer sales. Last season, loan receipts were 31 percent of producer sales.

Green River tobacco (type 36) sales began December 3, 2002 and were held for 8 days, ending on February 6, 2003. Auction sales accounted for 2.1 million pounds this season. The average price of \$198.8 per hundredweight was \$22.5 higher than last year. Volume declined 26 percent to 3.8 million pounds valued at \$6.6 million with price at \$173.3 per hundredweight. Producer sales were 3.6 million pounds compared with 4.8 million last season. About three-fourths of estimated production of 2.8 million pounds was sold at auction. Farmgate sales accounted for more sales than usual. Eighty percent of grade averages improved this season. Last season, 5.2 million pounds sold at auction with an average price of \$182.2 per hundredweight. Quality and maturity improved this season. Fair quality tobacco made up 45 percent of sales, up slightly from last year. Loan takings amounted to 49,258 pounds, or 2.5 percent of producer sales compared with 23 percent of last year.

Grower harvest intentions as of March 1, 2003, indicate 4,030 acres will be planted to One Sucker and Green River dark air-cured (types 35-36) tobacco, compared with actual harvested acres of 3,800 acres last season. Last year's intentions were 3,900 acres. With usual yields, production in 2003 should be about 10.3 million pounds, compared with 9.7 million pounds this season.

Allotments for dark air-cured tobacco were announced on February 28, 2003. For Type 35 and 36. allotments for the 2003 season are 4.307 acres. compared with 4,100 last season. In 2001, the allotment was 5,246 acres. Price supports are \$1.571 per pound, up 4.5 cents per pound from the 2002 season.

Disappearance of dark air-cured tobacco (type 35 and 36) is expected to slip from last season's 9.8 million pounds to about 7.0 million pounds. Year-to-date disappearance is 7.8 million pounds, 50 percent ahead of last year's level but disappearance will likely end near 10 million pounds compared with 8.4 million pounds in 2001.

Virginia sun-cured (type 37) tobacco sales were held for 3 days this season during December 2002 and January 2003, the same number of days as last season. Drought and extremely hot weather dampened yields and quality. Sales at the Farmville market totaled 110,619 pounds averaging \$177.7 per hundredweight. Last year, sales totaled 152,842 pounds averaging \$168.5 per hundredweight. There were no resales this season.

March 1 harvest intentions indicate growers will plant 70 acres in 2003. Last season, 70 acres were harvested. Production in 2003 should be about 100,000 pounds, assuming normal yields. Production in 2002 was 105,000 pounds.

On February 28, 2003, USDA announced acreage allotments for Virginia sun-cured tobacco of 76 acres compared with 78 acres in 2002. Price supports for 2003 are set at \$1.323 per pound, down from last year's \$1.286 per pound.

Disappearance during 2002 of Virginia sun-cured (type 37) tobacco is slightly behind the same period a year ago, and year-end disappearance is not expected to reach last year's 223,000 pounds.

Table 28--Dark air-cured tobacco, types 35-36, and sun-cured tobacco, type 37: Acreage, yield, production, carryover, supply, disappearance, season average price, and price support operations, 1993-2003 (farm-sales weight)

^{1/} Marketing year beginning October 1. 2/ Estimate 3/ March 1 harvest intentions.

^{4/} Estimate. 5/ Auction market only.

Cigar Tobacco

Filler Tobacco

March 1 harvest intentions for Pennsylvania seedleaf filler tobacco (type 41) in 2003 were up 100 acres from the previous season's intentions at 2,100 acres, the same as last season's actual production. Normal yields would produce a crop of about 4.3 million pounds. Growers continue to substitute low-nicotine cigarette types of tobacco for types traditionally grown in this region. Nearly all type 41 is sold at the farm gate. For the 2002 season, production is estimated at 4.4 million pounds, compared with 4.1 million pounds in 2001. Growers often shift between Pennsylvania seedleaf filler tobacco and Maryland tobacco, depending on market conditions. Most Pennsylvania seedleaf filler is sold during March and April.

Disappearance in 2002 is estimated at nearly twice the previous season based on first-quarter disappearance. Year-end use is expected to be about 2.3 million pounds.

Binder Tobacco

Connecticut Valley Broadleaf binder tobacco (type 51) harvest intentions were 2,450 acres as of March 1, 350 acres over last year's actual acreage. With usual

yields, production in 2003 should reach 4.0 million pounds. Disappearance during the first quarter of marketing year 2002 was down from the same period last season. Disappearance at the end of the marketing year should be lower at 3.6 million pounds. Disappearance in 2001 was only 4.3 million pounds.

Wisconsin binder tobacco (types 54 and 55) planting intentions rose from last year's 1,510 actual harvested acres to 1,650 acres. Production is expected to be about 3.8 million pounds, compared with 3.4 million pounds in 2002. Disappearance of Wisconsin binder tobacco is expected to be about 6 percent lower than last season.

Wrapper tobacco

Connecticut Valley cigar wrapper (type 61) tobacco 2003 harvest intentions as of March 1 indicate 1,000 acres will be harvested, 100 more than last year's actual harvest of 900 acres. In 2001, 1,300 acres were harvested. Assuming usual yields, 2003 production should advance to about 1.4 million pounds. For the 2002 marketing year, disappearance of Connecticut Valley cigar wrapper is expected to decline. During the first half of the marketing year, disappearance slipped by 68 percent. By the end of the marketing year, disappearance should reach 1.8 million pounds.

Reports From the Economic Research Service

Tobacco Industry Downsizing, Restructuring, http://www.ers.usda.gov/publications/agoutlook/jan2002/ao288c.pdf

A recent dramatic shift from auctioning to contract selling in the tobacco market is changing the character of the industry. By contracting directly with leaf producers, cigarette manufacturers have more influence over which qualities of leaf are available. In addition, already-existing restrictions on smoking areas and advertising and growing consciousness of the health risks of smoking are having a long-term effect on the industry.

Trends in the Cigarette Industry After the Master Settlement, http://www.ers.usda.gov/publications/tbs/oct01/tbs250-01/index.htm

Agreement describes the Master Settlement Agreement between cigarette manufacturers and States' attorneys general and provides readers with insights into changes in the cigarette industry since the agreement was signed. Cigarette companies have boosted prices as a result of payments required by the settlement. Higher prices have curtailed consumption, although not as much as originally expected. The long-term decline in cigarette consumption due to non-economic factors continues as well.
